

Industrial Visit to Lightweight Brick Manufacturing Factory

The Department of Civil Engineering, Vignan Institute of Technology and Management (VITAM), Berhampur, successfully organised an industrial visit for its students to a lightweight brick manufacturing factory.

The visit offered valuable practical exposure to contemporary construction practices. Students gained insights into various aspects of the manufacturing process, including the types of raw materials used, production techniques, quality control measures, and the advantages of lightweight bricks in modern construction. Such experiential learning opportunities play a vital role in bridging the gap between theoretical knowledge and real-world engineering applications.

This industrial visit was organised as a joint initiative of VITAM, Berhampur, and the Rotary Club of Brahmapur Creative. The institute sincerely acknowledges the support and cooperation extended by the Rotary Club in facilitating this enriching learning experience for the students.

The institute looks forward to organising more such collaborative initiatives to promote industry–academia interaction and enhance the professional development of its students.
